

MEASURING GUIDE

NORTHERN DIVER'S GUIDE TO ACCURATE MEASURING

The Northern Diver state of the art computerised cutting system ensures that all suits are precision made to your exact measurements. Each suit is designed, planned and graded on screen at our computer workstation, and then electronically transferred to the cutting bed, which gives a clean and accurate cut, ensuring maximum seam integrity.

Please refer to these diagrams to assist you in measuring.

To find whether you will fit into a stock size suit, simply visit:

www.diversizer.co.uk

Our automated system will analyse your height & weight and calculate your optimum suit size.

Remember, all measurements should be taken over the undersuit you intend to wear beneath your drysuit.

In order to ensure a perfect fit and years of trouble free service, we have produced a step-by-step guide describing the correct procedure to measure for a drysuit.

Please do not measure yourself, enlist the help of a second person to do it for you, as accuracy is essential for a good fitting suit.

Measurements can be made in either imperial or metric sizes and must be made over the undersuit you intend to wear. Your local dealer will be able to assist you in this task or alternatively contact Northern Diver's sales team who will be only too pleased to make suitable arrangements. (Undersuits available on loan subject to credit card details).

An accurate height and weight measurement is essential for a good fitting suit.

Key Info

- A** Height - to be measured against a wall, please do not guess
- B** Weight - to be taken on accurate scales in the Flectalon undersuit
