

THERMAL SKIN BODYLINE UNDERSUIT

Can be worn as a first layer in conjunction with the Northern Diver range of Metalux® undersuits for more extreme environments.

The Bodyline Undersuit has proved itself to be an incredibly versatile product. It is not only used by the diving community, but also in many other walks of life where keeping warm is essential.

Many divers are now using their Bodyline Undersuit as an additional layer of insulation beneath their wetsuit. This is proving to be very successful with those who want to wear their semi-dry wetsuits for longer durations, deeper dives or in cooler waters.

Cavers have also adopted the Northern Diver Bodyline for use beneath caving suits for comfort and warmth on long trips underground.

Even members of some mountain rescue teams wear this undersuit for cold nights on the hills.

Features

- Close fitting - fits like a "second skin"
- Manufactured from moisture wicking fleece & super stretch Lycra®
- Ideal base layer for surface use
