

DIVEMASTER SPORT 5MM NEOPRENE DIVING DRYSUIT

The Divemaster Sport drysuit is the first choice of active sport divers and supplied to commercial diving schools across the world. Manufactured from a specially formulated 5mm hyper-compressed neoprene, the Divemaster allows freedom of movement and real diving flexibility, as well as being exceptionally hard-wearing. Durability is increased by the heavy-duty piqué nylon outer shell. Hyper-compressed is not just a name to increase product appeal. This is a full commercial process, requiring the use of a 500 ton heated press. Although this may sound excessive, this is a necessary process to achieve the highest possible standards in neoprene manufacturing.

Our unique Ti-Ax® Thermacote® heat reflecting system is under the inner lining inside the drysuit. With a host of premium features as standard, this drysuit really is a leader in reliability. It gives the wearer a comfortable environment when diving and can be pitted against the harshest of diving scenarios, such as ice diving and long duration cold water diving. The Divemaster Sport is available as a perfectly fitting made-to-measure suit, but with standard off-the-peg sizes, most divers will be able to make an instant splash.

- 5mm hyper-compressed neoprene
- 'Bonded for life' seams
- Rear entry BDM metal zip with protective flap
- Yamamoto neoprene neck and wrist seals
- Low profile inflation and exhaust valves (standard positions)
- Bellows pocket (right leg)
