

5MM DRYSKIN GLOVES

A high-performance 5mm superstretch neoprene glove designed to provide exceptional warmth, comfort and flexibility in cold-water conditions. Featuring an internal dry seal ring to help minimise water ingress, the glove keeps your hands drier for longer, improving overall thermal protection.

The soft thermal fleece inner lining adds an efficient insulating layer while remaining quick-drying and exceptionally smooth against the skin. This advanced liner also enhances flexibility, allowing for improved dexterity and comfort during use.

Silicone-printed palms provide enhanced grip and control, making it easier to handle equipment securely in wet conditions. Externally sealed seams offer additional durability and reinforcement, helping to prevent seams from unpicking or loosening over time.

FEATURES

- 5mm neoprene thickness
- Superstretch neoprene construction for enhanced comfort and flexibility
- Internal dry seal ring to reduce water ingress
- Thermal fleece inner lining for warmth and quick drying performance
- Silicone-printed palm grips for improved handling and control
- Externally sealed seams for added durability and reinforcement

SIZES

S, M, L, XL, XXL
