

Designed for performance and comfort, Hot Sox socks are constructed from high-quality moisture-wicking fleece to keep your feet warm, dry, and comfortable throughout your dive.

Moisture build-up inside a drysuit is unavoidable, often generated by the diver's own body. Hot Sox actively wick this moisture away from the skin, helping regulate temperature and prevent discomfort during extended use.

The socks are double-sided for enhanced insulation and feature flatlock stitching throughout, eliminating raised seams that can cause pressure points or irritation inside boots or fins. A reinforced heel protector provides added durability and support in high-wear areas, while the ergonomic cut ensures a precise, comfortable fit.

**KEY FEATURES**

- High-performance moisture-wicking fleece construction
- Double-sided fabric
- Improved insulation
- Flatlock stitching for seam-free comfort
- Reinforced heel protector for durability
- Ergonomic fit for use inside drysuit boots
- Designed to keep feet dry, warm, and comfortable
