

MARINE TREK WETBOOTS

The Northern Diver Marine Trek Wet Boot is engineered for durability, comfort, and superior grip across a range of demanding environments, from recreational diving to military, rescue, and commercial applications.

Constructed from 5mm neoprene, these boots provide excellent thermal insulation while ensuring flexibility and comfort for extended use.

The rugged trainer-style sole offers exceptional traction on wet and uneven surfaces, enhancing slip resistance in high-performance situations. Reinforced rubber protection on the toe, heel, and sole increases durability, making these boots tough enough for the harshest conditions.

A zippered gusset with an anti-velcro lining ensures a secure and comfortable fit, preventing snags and irritation. The heel fin tab helps keep dive fins securely in place, making the Marine Trek Wet Boot a reliable choice for professional and recreational divers, water rescue teams, and commercial operators.

FEATURES

- 5mm neoprene construction for warmth and flexibility
- Triple-glued, blind-stitched seams for enhanced durability
- Rugged trainer-style sole for superior grip and slip resistance
- Reinforced rubber toe, heel, and sole for impact protection
- Zippered gusset with anti-velcro lining for a secure, irritation-free fit
- Fin tab located on the heel for improved fin strap security
