

5MM NEOPRENE SLIMFIT DRYSUIT BOOTS

Northern Diver Slimfit Drysuit Boots are designed to provide comfort, protection, and reliable performance in demanding diving environments. Suitable for commercial, military, rescue, technical, and recreational diving applications, these versatile boots can be fitted directly to a drysuit or used separately over soft drysuit socks.

Constructed from flexible 5mm neoprene, the boots help keep feet warm and comfortable in cold-water conditions while maintaining a slim, low-profile fit that reduces bulk and improves fin compatibility. Reinforced rubber protection on the heel, toe, sole, and upper foot enhances durability and helps protect against rough terrain, slipways, and abrasive surfaces.

The close-fitting design helps minimise excess air migration into the feet, improving trim and buoyancy control underwater. A durable non-slip sole provides reliable grip on wet and uneven surfaces, while the integrated fin strap retainer helps keep open-heel fin straps securely positioned during use.

FEATURES

- Can be fitted directly to a drysuit or used separately
- Two trim colour options available
- Slimfit low-profile design
- 5mm neoprene construction for warmth and flexibility
- Reinforced rubber protection for increased durability
- Non-slip sole for improved grip
- Integrated fin strap retainer
- Helps improve trim/buoyancy control
- Suitable for commercial, military, rescue, technical, and recreational diving applications
