

THERMALUX UNDERSUIT

Designed for divers who demand warmth without restriction, the Thermalux Drysuit Undersuit combines advanced thermal insulation, moisture management and ergonomic comfort in a lightweight, high-performance design. Delivering dependable thermal protection across a wide range of underwater environments.

The innovative 3-layer construction pairs a durable 40D nylon outer shell, 200gsm thermal polyester insulation, and a soft moisture-wicking microfleece lining to retain body heat while keeping you dry and comfortable throughout the dive. Strategically positioned Lycra stretch panels at the shoulders, underarms, lower back, cuffs and legs maximise flexibility, allowing unrestricted movement both in and out of the water.

With a TOG rating of 2.3, quick-drying, moisture-wicking fabrics and natural resistance to bacteria and fungi, the Thermalux is an ideal choice for divers operating in cold-water conditions. Each undersuit is supplied with a breathable mesh-panel carry bag for convenient storage and transport.

KEY FEATURES

- Lightweight design
- High-performance insulation
- Flexible and breathable construction
- Lycra stretch panels positioned at: shoulders, underarms, lower back, cuffs, lower legs, and ankles
- Soft fleece collar for added comfort
- Smooth interface with drysuit seals
