

5MM WEBBED GLOVES

The Dryskin Webbed Gloves are a game-changer for divers seeking enhanced propulsion and control underwater. Designed in collaboration with Guinness World Record holder and adaptive diver Dan Metcalfe, these gloves incorporate 5mm superstretch neoprene with integrated neoprene webbing between the fingers, maximising water resistance for increased efficiency with every stroke.

Built for warmth and durability, the Dryskin Webbed Gloves feature an internal dry seal ring to reduce water ingress, keeping hands drier and warmer for longer. A thermal fleece internal liner adds an extra layer of insulation while remaining smooth and quick-drying. The silicone printed palm grips ensure a secure hold on equipment, while externally sealed seams provide extra reinforcement for long-lasting performance.

Whether you're an adaptive diver, freediver, or looking for improved control in the water, these gloves offer superior functionality and comfort.

FEATURES

- 5mm superstretch neoprene for flexibility and warmth
- Neoprene webbing between fingers for enhanced propulsion
- Internal dry seal ring reduces water ingress
- Thermal fleece internal liner for insulation and quick drying
- Silicone printed palm grips for secure handling
- Externally sealed seams for durability and reinforcement
- Designed in collaboration with adaptive diver Dan Metcalfe @wheelsdan_1988

SIZES

S, M, L, XL, XXL
