

WEIGHT POCKET HOUSING FOR WEIGHT & TRIM HARNESS

The external pocket on a Weight & Trim harness.

These pouches are a pair - left and right - which offer the housing your weight pocket sits snugly in to attach to your harness.

While they aren't the pockets we think you'll need to replace too often, buying a new set will reinvigorate your Northern Diver Weight & Trim Harness.

With an adjustable three-pronged clip that slots easily onto the harness and a side squeeze clip that your thigh pockets hang from, the external pocket is an integral part of our Weight & Trim Harness design.

The squeeze button locks the pocket housing securely onto the shoulder straps of your harness. A useful marine grade stainless steel D-ring provides an additional anchor point to attach your gear.

The webbing provides additional adjustable options for where your pocket housing sits while the clip at the ends provides handy purchase should you need to tug the pocket holders from the harness in an emergency.

Compatible with both lead filled pouch and lead weights.

Compatible with both the V1 and V2 Weight and Trim Harness Designs.
