

SUPERSTRETCH GLOVES

These gloves are manufactured from Northern Divers unique 4-way Super Stretch Neoprene and incorporate our innovative Ti-Ax™ titanium super-warm inner lining, for the ultimate in comfort and superior heat retention.

They have been used extensively, by divers and dive schools, throughout the world and all over the UK, reported to be the easiest of all our gloves to put on and take off.

With superb comfort, great performance, fantastic heat retention and super easy use, these are (and have been for years) our best selling Neoprene gloves.

Now available in 3 thickness options, for superb versatility and superior adaptability to different diving environments. In addition, our legendary Superstretch gloves have also been chosen for many different non diving applications.

For warmer water or surface use, the 2mm option gives additional hand protection, without compromising on dexterity.

The 5mm options are ideal for colder conditions, above and below the surface, where thicker gloves are required but again, without compromising on dexterity.

For more extreme diving environments or colder surface use, where thicker gloves are essential (and dexterity is less of a factor), our 7mm options provide the ultimate in warmth with unprecedented flexibility. Divers have also reported that these are the most flexible 7mm Neoprene diving gloves currently available from any diving equipment manufacturer.

- Constructed From Unique 4-Way SuperStretch Neoprene
