

Underwater Wrist Slate

The underwater wrist slate is a hard durable plastic curved slate that provides a large amount of space to record information on compared with regular slates and is also in a comfortable position for writing on.

The wrist slate is an excellent solution for the diver who needs to communicate large amounts of information and is in an easily visible location.

Ergonomic underwater wrist slate with three double sided accessible pages and is supplied with a pencil that is attached with a high vis elasticated cord so that it does not get lost.

The user can easily adjust the wrist slate with the hook and loop fastening strap that will fit most wrist sizes.
