

BIO METAL MASKS

This new version of the Apollo Bio Metal Mask features a matte finish skirt and a low 100cc volume. The use of aluminium in the frame allows for a very low profile whilst still supporting a twin lens design. The slim centre pillar means a greater field of vision is attained compared with other twin lens masks.

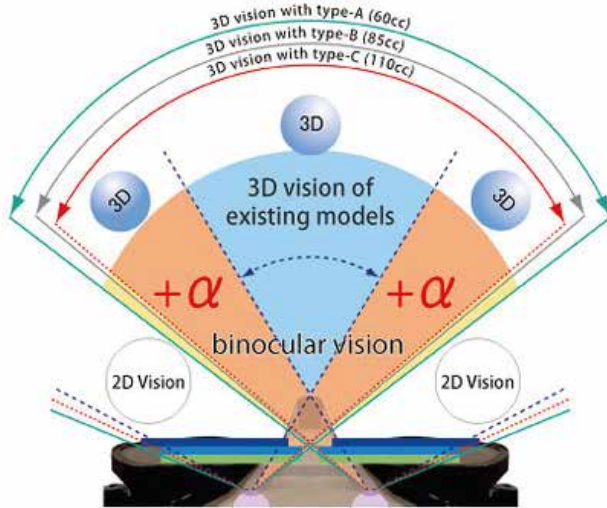

The soft surgical grade silicone skirt is designed to collapse accordion style, which combined with the wide split style mask strap, creates a perfect seal on the face. It also has integrated drainage channels in the skirt to allow hands-free clearing by simply looking up and exhaling through your nose.

This low volume mask has an easy-to-reach one handed nose pocket for ear equalisation which can be utilised even when wearing thick gloves. A silicone anti-adhesion sheet is fitted on the inner surface of the lens to minimise the occurrence of fogging. It is easily removed and can be replaced repeatedly for long-term use. The low profile frame and soft skirt make this an excellent fitting mask for almost any shape face.

- Strong, slim-line Aluminium Frame
- Soft Silicone Skirt
- One-touch buckles for easy adjustment
- Low 100cc volume
- Slim centre pillar for increased field of vision
- Supplied with Clear Plastic Protective Storage Box
- Available in a range of colours

Luxurious aluminum alloy machined frame delivers the accuracy and quality without compromise.

The metal frame attains width of the center portion of frames as only 7mm. It feels like a single lens mask.
