

CODA DUAL V2 DIVING FINN

High power is delivered through these underwater fins with less effort required from the diver. The split design allows water to flow in-between and around each of the twin blades, which flex independently to produce propulsion.

The V2 Coda are an easy kicking, high thrust fin that deliver the ultimate mix of speed and efficiency.

KEY FEATURES

- Designed to keep you swimming longer
- Less fatigue during the dive and very little risk of cramps
- Provides max propulsion with min effort
- Efficient split-fin design
- Superb power and performance
- Non-mag design ideal for Military use
- Heavy duty build quality - specially formulated thermal plastic rubber, fine-tuned to give an excellent balance between flexibility and rigidity
- Slice through the water with minimal resistance rather than pushing against the water with brute force like conventional paddle fins
- A smooth and stable kicking motion
- Drag-reducing vents where foot pocket and blade meet radically decrease drag on both up and down strokes
- Full manoeuvrability for both slow and rapid movements in the water
- Quick-connect swivel buckles allow for easy donning and doffing

TECHNICAL

- Build: thermoplastic vulcanizate, EPDM-elastomer
- Weight pair: 2.6kg (4.6lbs)
- LxWxD: 580*240*70mm (22.8*9.4*2.7")
- Colour: black
