

5MM SV DIVE HOOD WITH LINED OUTER FACE SEAL

The SV dive hood offers a superior fit and unrivalled comfort. Manufactured from supple, 5mm superstretch neoprene, and complete with a plush red internal lining, this hood fits like a comfortable second skin. This is further enhanced by the black skin neoprene face seals on the inside of the hood, designed to effectively hug the contours of the face, providing exceptional sealing properties.

Performance, fit and comfort are also improved thanks to the one-way Supervent valve, located at the top of the hood. This innovative vent removes trapped air from within the hood, increasing comfort and ensuring a perfect fit throughout the dive.

The effective fit and construction of the hood ensures exceptional thermal protection, however, this is further improved by a unique Ti-Ax® coating applied to the hood for superior heat retention. Likewise, it also features an external MA heavy duty coating, for increased durability and longevity.

FEATURES
