## OPEN WATER SWIMMING CAP

Anyone who has experienced 'brain-freeze' when swimming in cold water will know how valuable a 'triathlon' swim skull cap can be! Our neoprene Marlin Swim Cap provides warmth while maintaining good hydrodynamics through the water.

The Marlin Neoprene Swim Cap has a thermal lining to help keep off the chill from your head and ears as you continue your open water swimming adventures. Designed reduce stress and worry whilst in the water, the added brightly coloured panels increases visibility and a chin strap keeps the cap secure.

One of the biggest complaints from open water swimmers using one-piece caps is that they can feel 'tight' under the chin and have no adjustability. Our design includes a Velcro strap under the chin to cater for different head sizes. Lighting up at night in open water should be one of your top priorities. We have designed our cap with a light stick loop that can be used by swimmers at night or in situations when visibility is poor (e.g. fog).

### FEATURES

- 3.0mm high quality neoprene
- Glued and blind stitched seams
- Smooth-skin outer side panels
- Close-fitting, protective fit
- 10mm (0.4") elastic light stick loop on the back of the head
